

aur DRUM8

USER GUIDE

CONTROLS

SAMPLE EDITOR

This section allows you to edit parameters individually for each of the 8 samples, as follows:

Volume - adjusts the sample volume

Pan - sets the sample panning

Attack - determines the sample attack

Tune - lets you tune the sound across 3 octaves

In order to select a sample to edit, click the display above **Sample** and click on the desired sample.

You can assign a stereo output channel for each sample individually (from the **Output** dropdown menu). This is useful when you want to apply external effects per pad/sample.

Each sample from the **Sample** display menu is labelled with its corresponding pad number.

GLOBAL CONTROLS

These controls apply per kit (not individual sample) and they are **Gain**, **Filter** (lowpass) and **Reverb**.

You can select the desired drum kit from the top display.
